Zutphen Holland,

New website [Magnesiumsquare.com](http://magnesiumsquare.com) *Morgo Magnesium launches website about magnesium*

The new website www.magnesiumsquare.com offers a lot of general information about the metal magnesium and its specific material properties.

Morgo Magnesium Ltd., situated in Zutphen, (affiliated with Morgo Aluminium), supplier of extruded magnesium profiles and sheets/plates to the manufacturing industry, has launched this website specifically aimed at innovative companies.

The website provides a database from which the specifications of the various alloys can be downloaded. The various production techniques can be viewed through slide shows. As well as a series of machining of the material, which are implemented in the production of Morgo Magnesium. The new internet site can be used as a reference book and library. Everybody who has an interest in the various applications of magnesium may after registration bring up subjects for discussion in the forum.

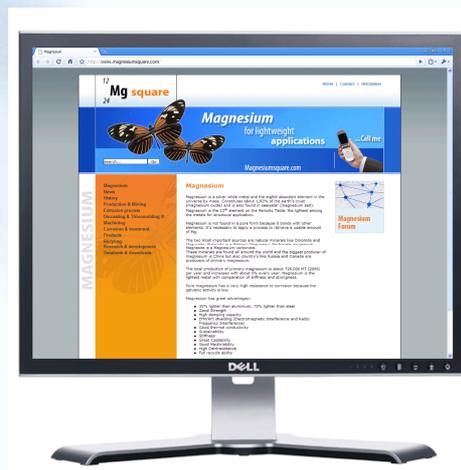

Magnesium is an innovative material with interesting characteristics as its weight (35% lighter than aluminium, 75% lighter than steel), strength (almost similar to aluminium), high durability and damping capacity. Magnesium has high thermal conductivity, is sustainable and is easy to recycle. Magnesium extrusions and diecasts are already used in the automotive, aerospace, sports and leisure industry.

Magnesium extrusions and sheet will be used in several other lightweight applications in the nearby future. The most common alloys in order of strength and weldability are ZM21, AZ31, AZ61, AZ80 and ZK 60, unlike aluminium magnesium loses no strength in welding. Magnesium is the metal of the future and all the relevant information is available at www.magnesiumsquare.com

Note to Editors:

For more information, please contact Mark Wemmenhove of Morgo Magnesium Ltd.
